

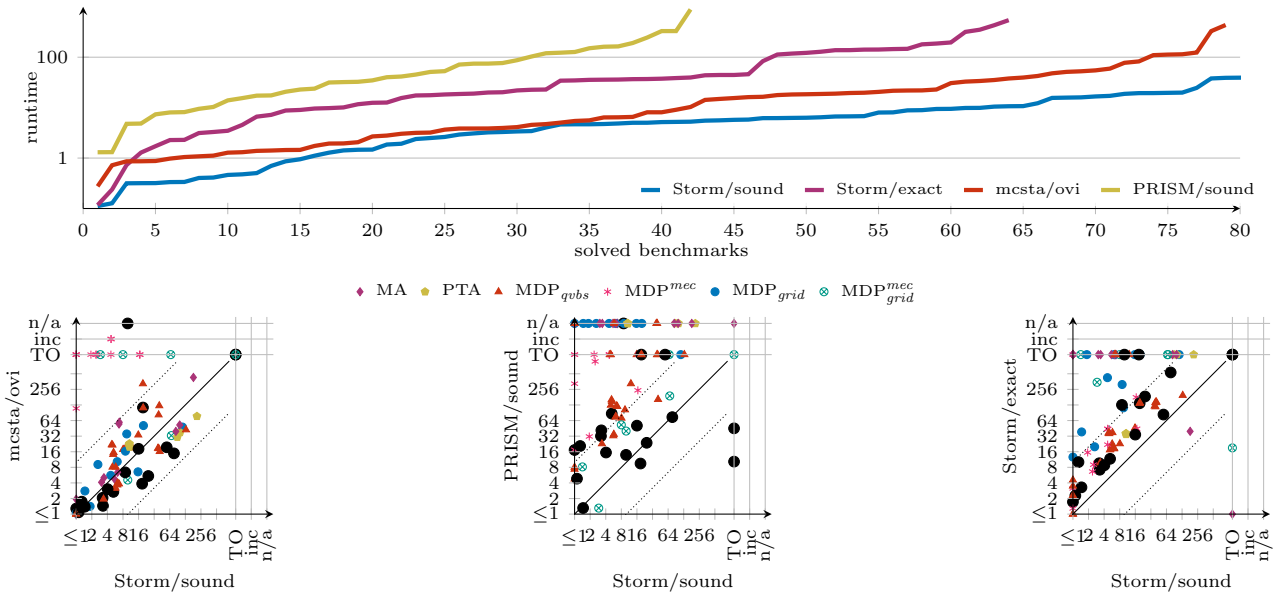

Figure 1: Comparison of Storm/sound, Storm/exact, mcsta/ovi and PRISM/sound. Top: quantile plot of the runtimes. Bottom: runtime of the other configurations against Storm/sound. Points marked *TO* ran out of time or memory, *inc* produced an incorrect result, and *n/a* produced no result or were not applicable.

No results in `data/imdp/scatter.csv`.

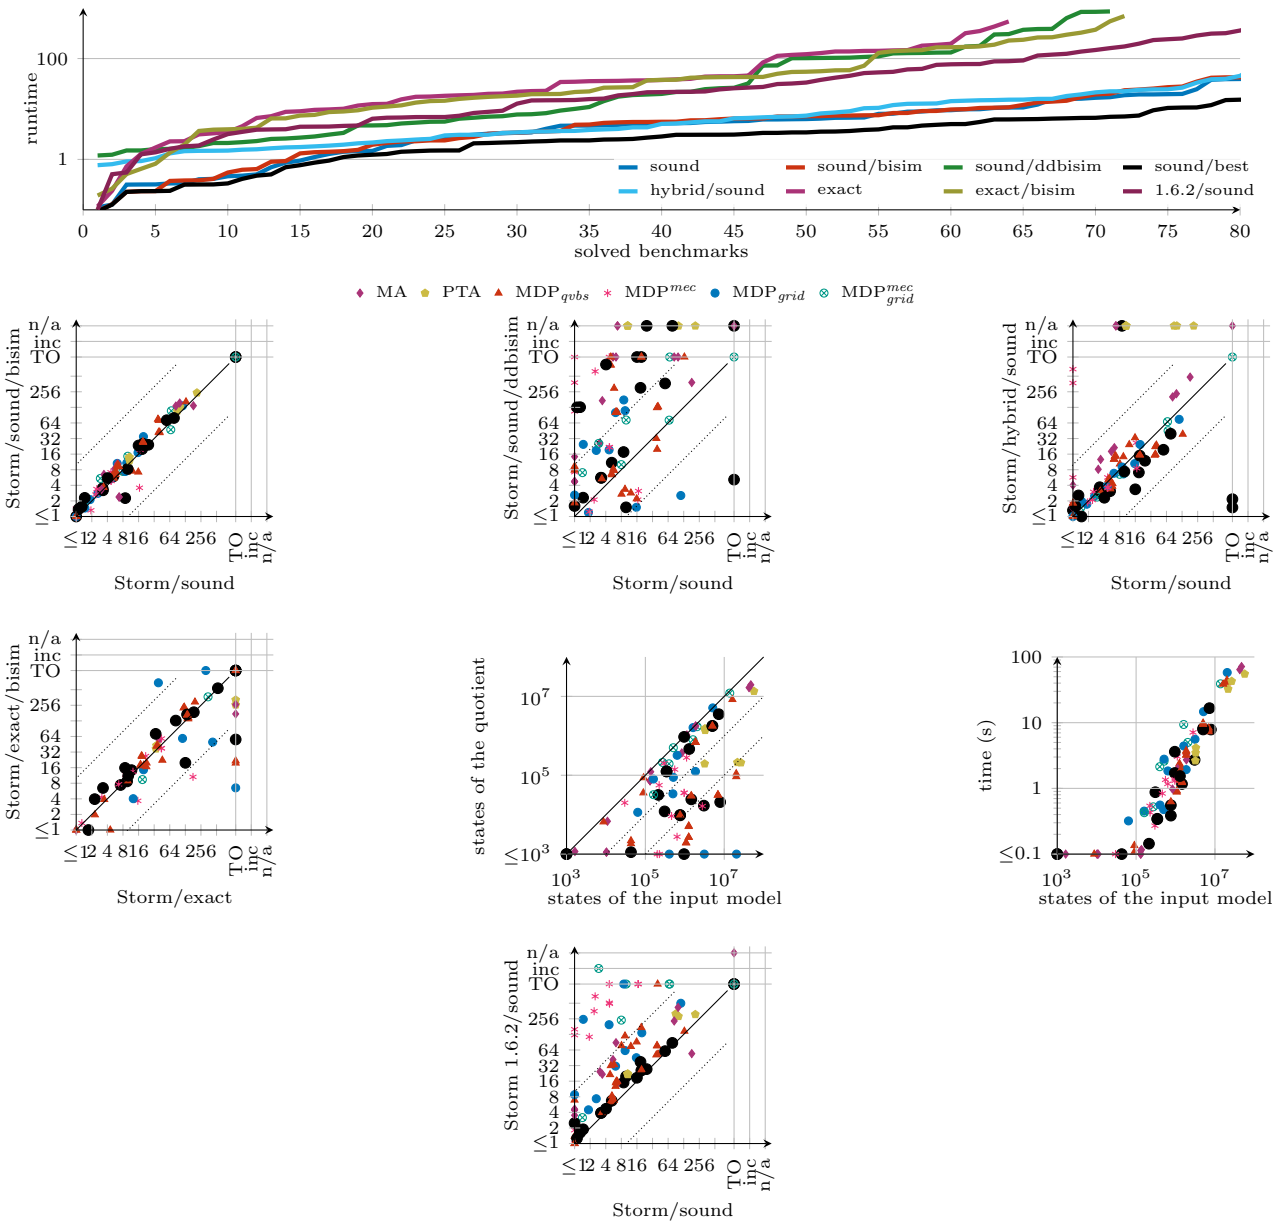

Figure 2: Variants of Storm (legend entries omit the tool name), including Storm 1.6.2 if it was run. Top: quantile plot of the runtimes. Below: runtime of one configuration against another; the plots of the size of the input model show it against the size of the bisimulation quotient and the time to compute it, respectively, for Storm/sound/bisim.
